Subject: Adobe Premiere Pro Project Feasibility Report & Documentation Plan

Date: 14 March 2024

Purpose:

The purpose of this memo is to assess the feasibility of my project idea and finalize a single project deliverable for submission by May 13, 2021.

Summary:

After brainstorming potential projects, I have decided on the idea of creating a video using Adobe Premiere Pro. The planned video will connect movies from the “Golden Age” of Hollywood (1920-1960) to technology and human culture. The ultimate goal is to create a competent video and sharpen my video editing skills. With proper time management and sufficient research, the video is feasible by the deadline of May 13, 2021.

Background & Discussion:

During the 1920s, the “Golden Age” or “Classical Era” of Hollywood began. Breakthroughs in sound technology revolutionized the previously silent movie industry, ushering in a new era with standardized movie production and introducing new creative possibilities which imaginative minds were eager to explore. Among the many genres which grew in popularity during this time was science fiction. Although the genre gained mainstream popularity some time after the Golden Age, the movies which emerged during this time are still important when considering how humanity viewed technology and its future.

I've identified three movies of interest. The first hurdle of my project is watching some movies and creating a script. Two of the films are science fiction and actively question the burgeoning technology around them. *Metropolis* (1927) seems to take a somber outlook on humanity's reliance on technology whereas *Just Imagine* (1930) appears to take a more comedic spin on the topic. The third film unknowingly reflects humanity's suspicions about the future of technology. *Citizen Kane* (1941) explores how media shapes human culture, and I believe it would be fascinating to analyze it through the lens of how technology can amplify human reach while potentially diminishing human depth. While these are the films I've selected, I believe that all film from this era is vital in understanding how technology intersects with human culture.

I plan to edit the video using Adobe Premiere Pro because it has embedded itself as the industry standard for many professional settings, being widely used in marketing, film, and content creation fields. It was preferred because of its Adobe Creative Cloud integration which makes it versatile and perfect for creative teams to work on together. Learning how to edit with Premiere will be the second major hurdle of this project. To address this, I plan to practice editing videos and to watch helpful tutorials about Premiere before editing my project. This grants me extra practice and an opportunity to familiarize myself with the application. I believe that learning how to optimally edit videos using Adobe Premiere Pro would be a valuable skill and make a brilliant addition to my resume.

Timeline of the Project:

Event	Start and End Date
Submit Feasibility Study	Mar 13
Download Adobe Premiere Pro	Mar 21

Watch tutorials for editing software/practice	Mar 22-Apr 3
Watch <i>Metropolis</i> (1927), <i>Just Imagine</i> (1930), and <i>Citizen Kane</i> (1941)	Apr 3-5
Draft video script	Apr 6-19
Finalize video script and record voice-over	Apr 20-26
Edit video	Apr 27 – May 13
Submit final video	May 13

Conclusion:

In conclusion, based on my current knowledge and research, I believe that the proposed plan to create a video by May 13, 2026, is feasible. As of now, the most glaring hurdles to overcome are finding the exact movies I want to analyze and learning how to use Adobe Premiere Pro. However, I've allotted myself plenty of time to address these problems. Even if the video I have envisioned in my mind doesn't come to fruition, it will nevertheless be a great opportunity to practice unfamiliar software and improve my video editing skills. I will take the necessary steps to ensure that I stay on the right path to completing my project for submission.
